# Ethernet I/O: EtherStax® Series

## ES2152 Ethernet Analog Input/Output Modules

32 analog current/voltage inputs ◆ 16 analog voltage outputs ◆ Modbus TCP/UDP, i2o communication

### Description

These EtherStax I/O units provide a rugged, high-density, and high-speed solution to interface a large quantity of analog input signals. Units accept 16 single-ended analog voltage inputs and 16 single-ended current inputs. The ES2152 also provides 16 analog voltage outputs. Two DB25 ports support an alternate interface of voltage I/O from microBlox® uB input or output modules. This combination of high-density analog inputs and outputs is ideal for many sensor interface applications in remote zones.

EtherStax units are built and tested for high reliability and dependable performance in hostile environments. Available in an aluminum enclosure or as an open circuit board, both formats stack vertically to maintain a very small footprint.

Interface to microBlox® uB signal conditioning modules.

### Input Ranges

±5V, ±10V, ±20mA, 0-20mA, 4-20mA DC
