General description	
Part number	MR09
Part name	Baseboard probe
When connected to a FLIR Moisture Meter (using the supplied cable), the MR09 allows the user to take relative moisture measurements behind trim pieces, baseboards, crown molding, and masonry; under tile, inside walls/ceilings, and other such places where the sensor blades can be inserted. The blades are designed to 'flex' into the measurement cavity eliminating the need to remove the obstacle that would otherwise prevent a standard pin or pinless measurement. This probe is designed to operate with FLIR Moisture Meters.
