High Accuracy Power Analysis. Anywhere, Anytime.

Upgrade New current sensors Engineered for more accurate power measurement Improved frequency bandwidth and accuracy

3year Warranty

Scan QR Code to Watch Video

High Accuracy and Mobility. A New Value for Power Analysis.

The first-generation Power Analyzer 3390 debuted in 2009 with a collection of the latest measurement technologies packed into a compact design.

Pair with Hioki current sensors and take them anywhere to immediately make highly accurate measurements.

This was the unique value of the 3390.

Now, Hioki has enhanced this value while refining the measurement technology even further.

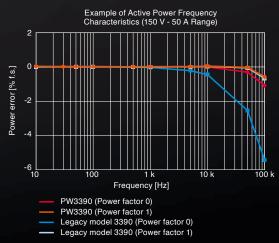

Proper accuracy and bandwidth to precisely measure inverter output. Phase shift function for the exact measurement of high frequency, low power factor power. A broad current sensor lineup that expands the range of measurement possibilities.

Refinements that empower you to conduct precise power analysis in any situation.

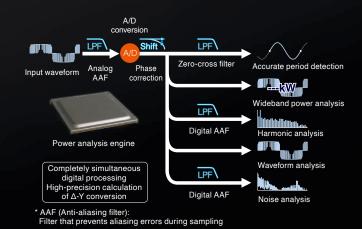

Complete Pursuit of Measurement Accuracy and High Frequency Characteristics

The PW3390 delivers 4 input channels and $\pm 0.04\%$ basic accuracy for power - the top instrument in its class. Achieve more precise measurements of the power and efficiency of high efficiency equipment used in power electronics. Further, a 200 kHz measurement band and flat amplitude and phase characteristics up to high frequencies enable the precise measurement of power at top frequency levels and low power factor.

Power Analysis Engine That Achieves High-Speed Simultaneous Calculation on 5 Systems

Precisely capture input waveforms with 500 kS/s high-speed sampling and a high resolution 16-bit A/D converter. The power analysis engine performs independent digital processing for 5 systems: period detection, wideband power analysis, harmonic analysis, waveform analysis, and noise analysis. High-speed simultaneous calculation processing enables both precise measurements and a 50 ms data refresh rate.

Current Sensors for the Thorough Pursuit of High Accuracy. Achieve Superior Accuracy for High-Frequency, Low Power Factor Power.

High Accuracy Pass-Through Sensor

Pass-through sensors deliver accuracy, broad-band performance, and stability. Measure currents of up to 1000 A with a high degree of accuracy across a broad range of operating temperatures.

High Accuracy Clamp Sensor

Clamp for quick and easy connections. Conduct extremely accurate measurements of large currents to a maximum of 1000 A over a wide operating temperature range.

High Accuracy Direct Wiring Sensor

Newly developed DCCT method delivers expansive measurement range and superior measurement accuracy at a rating of 50 A.

Built-in Current Sensor Phase Shift Function

Equipped with new virtual oversampling technology. Achieve phase shift equivalent to 200 MS/s while maintaining a high speed of 500 kS/s, as well as a high resolution of 16 bits. Set and correct the phase error of the current sensor at a resolution of 0.01°. Use of the phase shift function results in a dramatic reduction of measurement error. This allows the measurement of high-frequency, low-power factor power included in the switching frequency of inverter output, which is difficult to measure with conventional equipment.

Example of Phase Characteristic Compensation with AC/DC CURRENT SENSOR CT6862-05 (Typical Values) 2 0 -2 Phase [°] -4 -6 -8 -10 100 k 1 k 10 k Frequency [Hz] Phase Phase (Using the Phase Shift Function)

* Virtual oversampling:

Technology that uses a sampling frequency several hundred times higher than the actual sampling frequency to perform virtual deskewing

In the Laboratory or in the Field

Take Highly Accurate Measurements Even in Tough Temperature Conditions

Severe temperature environments, such as engine rooms with intense temperature changes and constant temperature rooms, can hinder high accuracy measurements. Hioki provides a lineup of high-accuracy through-type and high-accuracy clamp-type current sensors with excellent temperature characteristics and wide operating temperature ranges.

The PW3390 can operate from a low temperature environment of -10° C to a high temperature of 40°C, allowing you to take it to measure in various environments.

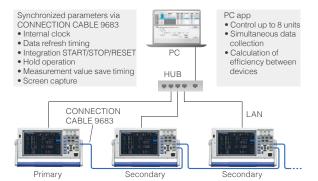

Max. 6000 A Measurement on 50 Hz/60 Hz Lines

The CT7040 AC FLEXIBLE CURRENT SENSOR series can measure commercial power lines up to 6000 A, including solar power conditioner output. Even thick cables can be wired easily among crowded wiring or in narrow locations.

Acquire Data from up to 8 Synchronized Units (32 Channels)

When you connect CONNECTION CABLE 9683 to multiple PW3390 units, the control signals and internal clocks synchronize. From the primary unit, you can control the measurement timing on the PW3390 units that are set as secondaries. With interval measurement, you can save synchronized measurement data to a CF card or a PC to achieve simultaneous measurements across a larger number of systems.

Achieve High Accuracy Measurement Even in the Field

Dramatically compact and light-weight form factor achieved by concentrating the calculation functions in the power analysis engine. Highly accurate measurements normally achieved in the laboratory are now also possible in the field.

External Power Supply Not Needed for Sensor Connections

Power can be supplied to the current sensor from the main unit, so there is no need to provide a separate external power supply for the current sensor. Connected sensors are recognized automatically, for reliable and quick measurements.

Wiring Displays and Quick Setup Lets You Begin Measuring Immediately

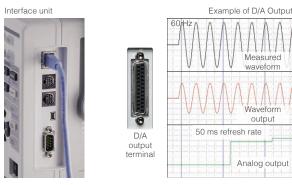

Perform wiring while checking wiring diagrams and vectors on the screen. Optimum settings are performed automatically simply by selecting a connection and using the quick setup function.

Extensive Interface for Linking with External Devices

Wide variety of built-in interfaces, including LAN, USB (communication, memory), CF cards, RS-232C, synchronization control, and external control.

D/A output* delivers analog output at 50 ms for up to 16 parameters. The voltage and current waveform** for each channel can also be output.

* Built-in for PW3390-02 and PW3390-03

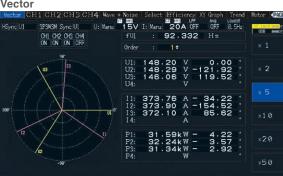

** During waveform output, accurate reproduction is possible at an output of 500 kS/s and with a sine wave up to 20 kHz.

Switch Screens with a Single Touch, Accessing a Variety of Power Analysis Methods

The power analysis engine allows the simultaneous, parallel calculation of all parameters. Access a variety of analysis methods simply by pressing the page keys to switch screens.

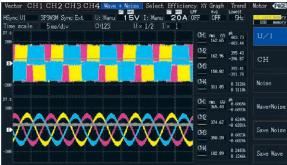

Vector

Confirm the voltage/current/power/phase angle for each harmonic order on a vector graph and as numerical values

Waveform

voltage/current waveforms for 4 channels at a high speed of 500 kS/s Di or a maximum length of 5 seconds. Waveform data can be saved.

Harmonics Graph

Display harmonics up to the 100th order for voltage/current/power in bar graphs. Confirm the numerical data for the selected order at the same time.

Select 4/8/16/32 display parameters individually for each screen, and summarize them on a single screen.

Display FFT results for voltage and current as graphs and numerical values, up to a maximum of 200 kHz. This is perfect for the frequency analysis of inverter noise.

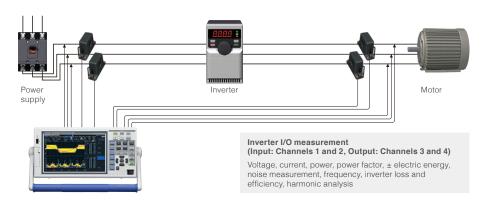

Choose up to eight measurement parameters and display a graph of their variations over time. You can also save a screenshot of the graph.

Create inverter characteristic evaluations and motor torque maps. Select the desired parameter to display an X-Y plot graph.

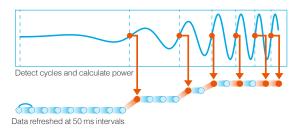

Applications

Measure the Power Conversion Efficiency of Inverters

Highly Accurate and Fast 50 ms **Calculation of Power in Transient State**

Measure power transient states, including motor operations such as starting and accelerating, at 50 ms refresh rates. Automatically measure and keep up with power with fluctuating frequencies, from a minimum of 0.5 Hz.

Automatic detection of fundamental wave even if the frequency fluctuates, from low to high frequencies

Evaluate high-frequency noise /// from an inverter

The enhanced noise analysis functionality provided by Version 2.00 of the instrument's firmware lets you perform frequency analysis of noise components from DC to 200 kHz, display and automatically save the top 10 points, and manually save the FFT spectrum. This functionality is an effective tool for evaluating conductive noise from 2 kHz to 150 kHz generated by inverters and switching power supplies.

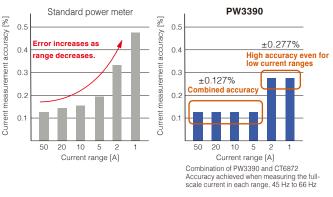

Key features

- 1. Isolated input of voltage and current on each of 4 channels for simultaneous measurement of the primary and secondary power of inverters
- Simultaneous measurement of all important parameters for secondary analysis of inverters, such as RMS value, MEAN value, and fundamental components
- Easy wiring with current sensors. Reliable confirmation of wiring with 3. vector diagrams
- 4. Current sensors reduce effects of common mode noise from inverters during power measurement
- 5. Simultaneous measurement of noise components, in addition to the harmonic analysis required for the measurement of inverter control

Achieve high accuracy measurement, including in low current ranges

When used with a high accuracy current sensor*1, the PW3390 delivers exceptional accuracy*2. Achieve high accuracy measurement regardless of range, from high to low currents, even for loads that exhibit significant fluctuation.

Example of combination accuracy with current sensor

Pass-through type: CT6872, CT6873, CT6875A, CT6876A, CT6877A Clamp type: CT6841A, CT6843A, CT6844A, CT6845A, CT6846A Direct connection type: PW9100A At DC and 50 Hz/60 Hz

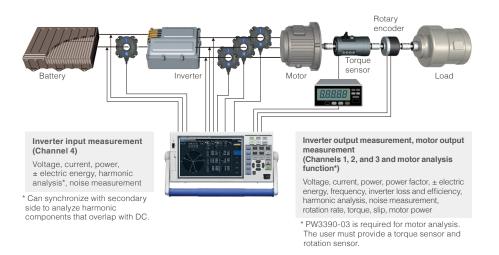

Visually assess temporal fluctuations in efficiency

The trend display lets you graph user-selected measurement parameters such as efficiency and frequency over periods of time ranging from dozens of seconds to half a month. This capability makes it possible to visually assess fluctuations, including of transient states in which measured values fluctuate abruptly and steady states in which they exhibit minuscule fluctuations. Graphs can be saved as screenshots, and values can be automatically saved.

Analyze and Measure EV/HEV Inverter Motors

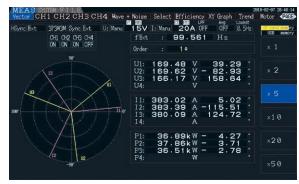

Key features

- Easy wiring and highly accurate measurements with the use of a pass-through type current sensor
- Simultaneous measurement of all important parameters for secondary analysis of inverters, such as RMS value, MEAN value, and fundamental components
- 3. 0.5 Hz to 5 kHz harmonic analysis without external clock
- Total measurement of inverter motors with built-in motor analysis function
- Measurement of the voltage, torque, rotation rate, frequency, slip, and motor power required for motor analysis with a single unit
- More precise measurements of electrical angle with incremental type encoders

Electric Angle Measurement of Motors (PW3390-03 only)

The PW3390-03 features a built-in electric angle measurement function required for vector control via dq coordinate systems in high-efficiency synchronized motors. Make real-time measurements of phase angles for voltage and current fundamental wave components based on encoder pulses. Further, zero-adjustment of the phase angle when induced voltage occurs allows electric angle measurement based on the inductive voltage phase. Version 2.00 of the firmware introduces the ability to display and manually set phase zero-adjustment values, making it possible to measure electrical angle using a user-selected zero-adjustment value. Electric angle can also be used as an Ld and Lq calculation parameter for synchronized motors.

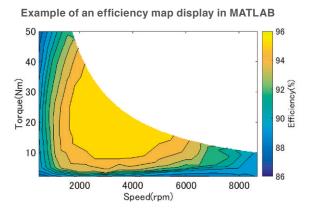

/ Ver 2.00 //

Display motor electric angles on the vector screen

Evaluate inverter motor efficiency and loss

Evaluate efficiency and loss for an inverter, motor, and overall system by simultaneously measuring the inverter's input and output power and the motor's output. You can also create an efficiency map or loss map in MATLAB using measurement results recorded by the PW3390 at each operating point.*MATLAB is a registered trademark of Mathworks, Inc.

For CH B, enter the Z-phase pulse of the encoder to measure electric angle, and enter the B-phase pulse to measure rotation direction.

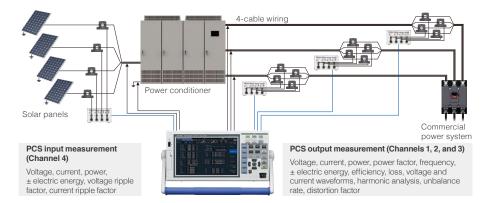

Transfer to Data Logger via Bluetooth[®] wireless technology

Connect the PW3390 and a data logger (with support of LR8410 Link) via Bluetooth[®] wireless technology to wirelessly transmit 8 parameters of measurement values from the PW3390 to the data logger. In addition to the voltage, temperature, humidity, and other parameters measured by the multichannel data logger, you can also integrate the measurement values of the PW3390 and observe and record them in real time.

* Connection requires the serial - (Bluetooth® wireless technology) conversion adapter and power supply adapter recommended by Hioki. Please inquire with your Hioki distributor.

Measure the Efficiency of PV Power Conditioners (PCS)

Key features

- 4 built-in channels, standard. Simultaneously measure the I/O characteristics of power conditioners.
- Current sensors can measure even large currents with high accuracy. Reliable confirmation of wiring with vector diagrams.
- Measure the amount of power sold/ purchased from power conditioner output on interconnected systems with a single unit.
- DC mode integration function, which responds quickly to input fluctuations such as with solar power, built in.
- Measure ripple factor, efficiency, loss, and all other parameters that are required for the measurement of power conditioners for solar power with a single unit.

HIOKI's Current Measurement Solutions for Large Currents of 1000 A or More

Introducing a lineup of sensors taking measurements up to 6000 A for 50 Hz/60 Hz, and up to 2000 A for direct current. The CT9557 SENSOR UNIT lets you add the output waveforms from multiple high accuracy sensors. Use multi-cable wiring lines to take highly accurate measurements of up to 8000 A.

Support for PCS Parameters

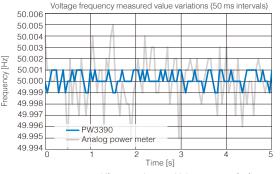

Simultaneously display the parameters required for PCS, such as efficiency, loss, DC ripple factor, and 3-phase unbalance rate. Easily check the required measured items for improved test efficiency. By matching the measurement synchronization source for both input and output, you can perform DC power measurements that are synchronized with the output AC as well as stable efficiency measurements.

Test Automobile Fuel Economy

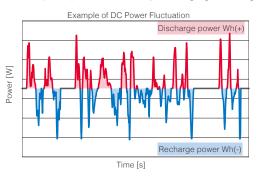

Evaluate WLTC Mode Performance - A New Fuel Economy Standard

Taking fuel economy measurements that comply with WLTP standards requires the precise measurement of current integration and power integration for the recharging/ discharging of each battery in the system. High accuracy clamp current sensors, the excellent DC accuracy of the PW3390, and the ability to integrate current and power at 50 ms intervals are extremely effective in meeting this application.Furthermore, the operating temperature range of the PW3390 has now been extended to reach -10°C, enabling the WLTP measurement in -7°C environments.

Current and Power Integration Function by Polarity

DC integration measurement integrates the recharging power and discharging power by polarity for every sample at 500 kS/s, and measures positive-direction power magnitude, negative-direction power magnitude, and the sum of positive- and negative-direction power magnitude during the integration period. Accurate measurement of recharging power and discharging power is possible even if there is rapid repetition of battery recharging/discharging.

Key features

- Accurately measure recharge and discharge power with excellent basic accuracy and DC accuracy. 1.
- 4 built-in channels, standard. Support for multiple recharge and discharge measurements, including auxiliary batteries
- 3. Easily achieve highly accurate measurements with clamp sensors which can be used in a wide range of operating temperatures.
- Perform the -7°C low temperature test (WLTP standards) in the same environment as the automobile.

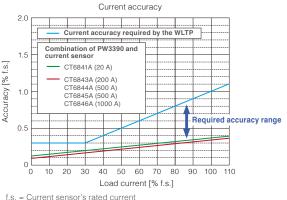

Scan OR Code to Watch Video Illustrating Fuel Economy Evaluation of an Automobile

High-accuracy Current Sensors That Are Ideal for Vehicle Measurement

Ю.

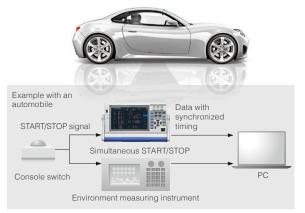

Clamp-type current sensors satisfy the current accuracy requirements imposed by the WLTP, as illustrated in the graph below. Sensors can be easily affixed without cutting cables in circuits under measurement, and they're available with a broad range of ratings (20 A to 1000 A) so that you can choose the right model based on vehicle type and measurement locations.

(If using a current sensor with a rated current of 500 A, 100% f.s. is 500 A.)

Link to Peripheral Devices via External Control

Use external control terminals to START/STOP integration and capture screen shots. This makes it easy to control operations from console switches and link to the timing of other instruments when measuring the performance of an actual automobile.

External Appearance

Software

Download software, drivers, and the Communications Command Instruction Manual from the Hioki website. https://www.hioki.com

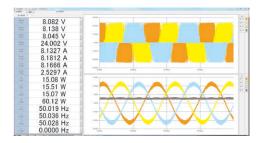

PC Communication Software – PW Communicator

PC Communicator is a free application that connects to the PW3390 via a communications interface (LAN, RS-232C, or GP-IB), making it easy to configure the instrument's

settings and to monitor or save measured values and waveform data from a computer. The software can simultaneously connect to up to 8 Hioki power measuring instruments,

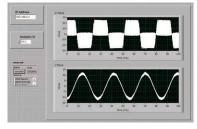

including the PW3390, Power Analyzer PW6001, Power Meter PW3335, PW3336, and PW3337, and it can provide integrated control over multiple models. The software can

also be used to simultaneously save measurement data on the computer and calculate efficiency between instruments.

LabVIEW driver

Use the bundled LabVIEW driver to build a measurement system via a simple programming interface that lets you place icons on a window and connect them with lines. Multiple sample programs for configuring settings and downloading data are available, so you can get started right away.

*LabVIEW is a registered trademark of National Instruments.

GENNECT One SF4000

The SF4000 is a free application software that lets you display and save measurement data on a PC in real-time after connecting the PW3390 to the PC via Ethernet.

The application is also compatible with other Hioki measuring instruments such as Memory HiLogger LR8450 and the Wireless Logging Station LR8410, letting you connect up to 30 units at the same time to monitor, graph and display lists of measured values from multiple instruments all at once and in real-time. This is especially effective for performing a total analysis of power, temperature and other factors of equipment.

Remote control using an web browser

Use the PW3390's HTTP server function to connect to a computer via a LAN interface. You can configure settings or check data from a remote location using a virtual control panel that is displayed in the browser window.

-3. Integration Measurement Specifications

Measurement mode	Selectable between RMS or DC for each wiring mode
Measurement items	Current integration (Ih+, Ih-, and Ih), active power integration (WP+, WP-, and WP) Ih+ and Ih- only for DC mode measurements, and Ih only for RMS mode measurements
Measurement method	Digital calculation from each current and active power phase (when averaging, calculates with previous average value) In DC mode: calculates current value at every sample, and integrates instantaneous power independent of polarity In RMS mode: Integrates current effective values between measurement intervals, and polarity-independent active power value
Measurement interval	50 ms data update interval
Measuring range	Integration value: 0 Ah/Wh to ±9999.99 TAh/TWh Integration time: No greater than 9999h59m
Integration time accuracy	±50 ppm ±1 dgt. (-10°C to 40°C (14°F to 104°F))
Integration accuracy	± (current and active power accuracy) ± integration time accuracy
Backup function	Integration automatically resumes after power outages.

-4. Harmonic Measurement Specifications

Number of	4 channels Harmonic measurements not available for multiple systems with different frequencies.					
Measurement items						
weasurement items	Harmonic rms voltage, harmonic voltage percentage, harmonic voltage phase angle, harmonic rms current, harmonic current percentage, harmonic current phase angle,					
	harmonic active power, harmonic power percentage, harmonic voltage-current phase difference, total harmonic voltage distortion, total harmonic current distortion,					
	voltage unbalance factor, cu					
Measurement method	Zero-crossing synchronou			vindow), with gap		
	Fixed 500 kS/s sampling, a Equal thinning between ze			(lation)		
	1 0	0 (,		
Harmonic sync source	U1 to U4, I1 to I4, External selectable (50 ms or 100 r		ysis and CH B set id	or puise input), DC		
FFT calculation word length	32 bits	,				
Anti-aliasing filter	Digital filter (automatically	set based on syr	hchronization freque	ency)		
Windows	ectangular					
Synchronization frequency range	As specified for power measurements					
Data update interval	50 ms (measurement-frequency-dependent at 45 Hz and below)					
Phase zero adjustment	Provided by key operation or external control command (only with external sync source)					
	Automatic or manual configuration of phase zero-adjustment values					
	Phase zero-adjustment setting range: 0.00° to ±180.00° (in 0.01° increments)					
THD calculation	THD-F/THD-R					
Highest order analysis	Synchronization	Window	Analysis order]		
and window waveforms	frequency range	waveforms

-5. Noise Measurement Specifications

0	
Calculation channels	1 (Select one from CH1 to CH4)
Calculation items	Voltage noise/Current noise
Calculation type	RMS spectrum
Calculation method	Fixed 500 kS/s sampling, thinning after digital anti-aliasing filter
FFT calculation word length	32 bits
FFT data points	1000/5000/10,000/50,000 (according to displayed waveform recording length)
Anti-aliasing filter	Automatic digital filter (varies with maximum analysis frequency)
Windows	Rectangular/Hanning/flat-top
Data update interval	Determined by FFT points within approx. 400 ms, 1 s, 2 s, or 15 s, with gap
Highest analysis frequency	200 kHz/50 kHz/20 kHz/10 kHz/5 kHz/2 kHz
Frequency resolution	0.2 Hz to 500 Hz (Determined by FFT points and maximum analysis frequency)
Noise amplitude measurement	Calculates the ten highest level and frequency voltage and current FFT peak values (local maxima).
Lower limit noise frequency	0 kHz to 10 kHz
-6. Motor Analysis	Specifications (Model PW3390-03)
Number of input channels	3 channels CH A: Analog DC input/Frequency input (selectable) CH B: Analog DC input/Pulse input (selectable)

	CH Z: Pulse input
Measurement input terminal type	Insulated BNC jacks
Input impedance (DC)	1 MΩ ±100 kΩ
Input methods	Isolated and differential inputs (not isolated between channels B and Z)
Measurement items	Voltage, torque, rotation rate, frequency, slip, and motor power
Synchronization source	U1 to U4, I1 to I4, Ext (with CH B set for pulse input), DC (50 ms/100 ms) Common to channels A and B
Measurement frequency source	f1 to f4 (for slip calculations)
Maximum input voltage	±20 V (during analog, frequency, and pulse input)
Maximum rated voltage to earth	50 V (50 Hz/60 Hz)

(1). Analog DC Input (CH A/CH B)

Measurement range	±1 V, ±5 V, ±10 V (when inputting analog DC)		
Valid input range 1% to 110% f.s.			
Sampling 10 kHz/16 bits			
Response time 1 ms (measuring zero to full scale, with LPF off)			
Measurement method	Simultaneous digital sampling and zero-crossing synchronous calculation system (cumulative average of intervals between zero crossings)		
Measurement accuracy	±0.08% rdg. ±0.1% f.s.		
Temperature coefficient	±0.03% f.s./°C		
Effect of common mode voltage	Not more than ±0.01% f.s. (with 50 V IDC or 50 Hz/60 Hz) between measurement jacks and PW3390 chassis)		

Effect of external magnetic field	Not more than ±0.1% f.s. (at 400 A/m DC and 50 Hz/60 Hz magnetic fields)
LPF	OFF/ON (OFF: 4 kHz, ON: 1 kHz)
Total display area Zero adjustment	Zero-suppression range setting ±120% Zero-corrected input offset of voltage ±10% f.s. or less
Scaling	0.01 ~ 9999.99
Unit	CH A: V, N• m, mN• m, kN• m, CH B: V, Hz, r/min
(2). Frequency Inpu Valid amplitude range	ut (CH A only) ±5 V peak (5 V symmetrical, equivalent to RS-422 complementary signal)
Max. measurement frequency	100 kHz
Measurement range	1 kHz to 100 kHz
Data output interval Measurement accuracy	According to synchronization source ±0.05% rdg., ±3 dgt.
Total display area	1.000 kHz to 99.999 kHz
Frequency range	Select fc and fd for frequency range fc \pm fd [Hz] (frequency measurement only) 1 kHz to 98 kHz in 1 kHz units, where fc + fd < 100 kHz and fc - fd > 1 kHz
Rated torque Unit	1 ~ 999 Hz, N• m, mN• m, kN• m
3). Pulse Input (CH	
Detection level	Low: 0.5 V or less; High: 2.0 V or more
Measurement range	1 Hz to 200 kHz (at 50% duty)
Division setting range	1~60000
Measurement	0.5 Hz to 5.0 kHz (limited to measured pulse frequency divided by selected no. of divisions)
frequency range Minimum detectable	2.5 µs or more
pulse width	,
Measurement accuracy	
Motor poles Max. measurement	2 ~ 98 100 Hz, 500 Hz, 1 kHz, 5 kHz
frequency Pulse count	Integer multiple of half the number of motor poles, from 1 to 60,000
Unit	Hz, r/min
4). Pulse Input (CH	
Detection level Measurement range	Low: 0.5 V or less; High: 2.0 V or more 0.1 Hz to 200 kHz (at 50% duty)
Minimum detectable	2.5 µs or more
pulse width Settings	OFF/Z Phase/B Phase (clear counts of CHB in rising edge during Z Phase,
7 0/0 0 10 100	detect polar code for number of rotations during B Phase)
	on Specifications (Models PW3390-02 and PW3390-03)
Number of output channels	16 channels CH1 to CH8: Selectable analog/waveform outputs
Output contents	CH9 to CH16: Analog output
Output items	Analog output: Select a basic measurement item for each output channel.
Output connector	Waveform output: Output voltage or current measured waveforms. One 25-pin female D-sub
D/A conversion	16 bits (polarity + 15 bits)
resolution	
Output accuracy	Analog output: Measurement accuracy ±0.2% f.s. (DC level) Waveform output: Measurement accuracy ±0.5% f.s. (at ±2 V f.s.),
	±1.0% f.s. (at ±1 V f.s.)
Output update interval	(rms level within synchronous frequency range) Analog output: 50 ms (according to input data update interval of selected parameter
Output update interval	Waveform output: 500 kHz
Output voltage	Analog output: ±5 V DC nom. (approx. ±12 V DC max.) Waveform output: ±2 V/±1 V switchable, crest factor of 2.5 or greater
	Setting applies to all channels. 100 Ω ±5 Ω
Output impedance

(5). RS-232C Interface

Method	RS-232C, [EIA RS-232D], [CCITT V.24], [JIS X5101] compliant
	Full duplex, start-stop synchronization, 8-bit data, no parity, one stop bit
	Hardware flow control, CR+LF delimiter
Connector	D-sub9 pin connector ×1
Communication speeds	9600 bps, 19,200 bps, 38,400 bps
Function Command control, Bluetooth® logger connectivity (simultaneous use no supported)	
(6). Synchronizatio	n Control Interface
Signal contents	One-second clock, integration START/STOP, DATA RESET, EVENT
Connector types	IN: One 9-pin female mini-DIN jack, OUT: One 8-pin female mini-DIN jack
Signal	5 V CMOS
Max. input	±20 V
Max. signal delay	2 μs (rising edge)
(7). External Contro	bl Interface
Connector types	9-pin round connector x1; also used as synchronization control interface
Electrical specifications	Logic signal of 0 V/5 V (2.5 V to 5 V), or contact signal (shorted/open)
Function	Integration start, integration stop, data reset, event (the event set as the
	synchronization control function)
	Cannot be used at the same time as synchronization control.

Function Specifications -1. Control Functions

 Control Function 	ns					
AUTO range function	Automatically selects voltage and current ranges according to measured ampli- tude on each phase. Operating states: Selectable on or off for each phase system Auto-ranging span: Wide/Narrow (common to all wiring systems)					
Timing control function						
Hold function	Stops all updating of displayed measurement values and waveforms, and holds display. Internal calculations such as integration and averaging, clock, and peak-over display continue to be updated.					
Peak hold function	alispary continue to exposite a All measurement values are updated to display the maximum value for each measurement. Displayed waveforms and integration values continue to be updated with instan- taneous values.					
-2. Calculation Fun	ictions					
Scaling calculation	VT(PT) ratio and CT ra	atio: OFF/0.01	to 9999.99			
Average calculation	OFF/FAST/MID/SLOW/SLOW2/SLOW3 Exponentially averages all instantaneous measurement values including harmonics (but not peak, integration, or FFT noise values). Applied to displayed values and saved data. Response speed (time remains within specified accuracy when input changes from 0 to 100% f.s.)					
Efficiency and loss calculations	FAST: 0.2 s, MID: 1.0 s, SLOW: 5 s, SLOW2: 25 s, SLOW3: 100 s Efficiency n [%] and Loss [W] are calculated from active power values measured on each phase and system. For PW3390-03, motor power (Pm) is also applied as a calculation item. Maximum no. of simultaneous calculations: Efficiency and loss, by three formulas (Parameters are specified for Pin and Pout) Calculation method: Efficiency n = 100 x IPout/IPinI Loss = IPin - IPoutI					
Δ-Y calculation	For 3P3W3M systems, converts between line-to-line voltage and phase voltage waveforms using a virtual center point. All voltage parameters including harmonics such as true rms voltage are calculated as phase voltage waveforms. U1s = (U1s-U3s)/3, U2s = (U2s-U1s)/3, U3s =(U3s-U2s)/3					
Selecting the calculation method	TYPE1/TYPE2 (only va Select the calculation power during 3P3W3M Only affect measurem	method used I wiring.	to calculate th	e apparent po	ower and reactive	
Current sensor phase correction calculations	Only affect measurement values \$123, Q123, Q123, A123 Compensation by calculating the current sensor's harmonic phase characteristics Correction points are set using frequency and phase difference (set separately for each wiring mode). Frequency: 0.001 kHz to 999.999 kHz (in 0.001 kHz increments) Phase difference: 0.00 °, to ±90.00 °, (in 0.01 °, increments) However, the time difference calculated from the frequency phase difference is limited to a maximum of 200 us in 5 ns increments.					
-3. Display Functio	ns					
Wiring Check screen	The wiring diagram an wiring system(s). The correct range for t confirm proper measure	he wiring syst	em is shown			
Independent wiring system display mode	confirm proper measurement cable connections. Displays power and harmonic measurement values for channels 1 to 4. A composite measurement line pattern is displayed for each system. Basic, voltage, current, and power measurement parameter, harmonic bar graph, harmonic list, and harmonic vector screens					
Display Selections screen	Select to display any 4 Display layout: 4, 8, 16				parameters.	
Efficiency and Loss screen	The efficiency and loss	s obtained by	the specified	calculation fo	rmulas are	
Waveform & Noise screen	Voltage and current wa are displayed compres Trigger: Synchronized Recording length: 100	displayed numerically. Three efficiency and three loss values. Voltage and current waveforms sampled at 500 kHz and noise measurements are displayed compressed on one screen. Trigger: Synchronized with the harmonic sync source Recording length: 1000/5000/10,000/50,000 x All voltage and current channels Compression ratio: 1/1, 1/2, 1/5, 1/10, 1/20, 1/50 (peak-to-peak compression) Recording time:

Trend screen	Display a time-sequence graph of measured values for basic measurement parameters that have been selected as trend display parameters. Waveforms are graphed using peak-peak compression of data refresh rate data based on the time axis setting. Data is not stored. Number of graphed parameters: Up to 8 Time axis: 1.5 / 3 / 6 / 12 / 30 s/div; 1 / 3 / 6 / 10 / 30 min./div; 1 / 3 / 6 / 12 hour/div; 1 day/div. Vertical axis: Auto (configureds that the data in the screen display range fits on the screen) / semi-auto (user selects the zoom factor relative to the full-scal values for graphed parameters from the following: 1/8, 1/4, 1/2, x1, x2, x5, x10 x50, x100, x200, x500) /manual (user sets the maximum and minimum values for the display)
X-Y Plot screen	Select horizontal and vertical axes from the basic measurement items to disple on the X-Y graphs. Dots are plotted at the data update interval, and are not saved. Drawing data can be cleared. Horizontal: 1 data item (gauge display available), Vertical: 2 data items (gauge
-4. Saving Function	display available)
Auto-save function	As the items to be saved, select any measured values including harmonics and noise value data of the FFT function. The selected items are stored to CF card during every measurement interval. (Storage to USB memory is not available.) Can be controlled by timer or real-time clock. Max. no. of saved items: Interval-setting-dependent Data format. CSV format
Manual saving function	
	Measurement data As the items to be saved, select any measured values including harmonics and noise value data of the FFT function. Pressing the SAVE key saves each measurement value at that moment to the save destination. File format: CSV format Screen capture The COPY key captures and saves a bitmap image of the display to the sav destination. "This function can be used at an interval of 5 sec or more while automatic saving is in progress. File format: Compressed BMP format Settings data Settings information can be saved/loaded as a settings file. File format: SET format (for PW3390 only)
	Waveform data
	Saves the waveform being displayed by means of [Wave/Noise] display. File format: CSV format FFT dat Save the noise measurement FFT spectrum shown on the Waveform/Noise scree File format: CSV format
-5. Synchronous C	Saves the waveform being displayed by means of [Wave/Noise] display. File format: CSV format +FFT data Save the noise measurement FFT spectrum shown on the Waveform/Noise scree File format: CSV format ontrol Function
Function	Saves the waveform being displayed by means of [Wave/Noise] display. File format: CSV format +FFT dat Save the noise measurement FFT spectrum shown on the Waveform/Noise scree File format: CSV format ontrol Function Synchronous measurements are available by using sync cables to connect Model PW3390 (primary/secondary). When internal settings match, auto-save is available while synchronized.
Function Synchronized items	Saves the waveform being displayed by means of [Wave/Noise] display. File format: CSV format +FFT data Save the noise measurement FFT spectrum shown on the Waveform/Noise scree File format: CSV format ontrol Function Synchronous measurements are available by using sync cables to connect Model PW3390 (primary/secondary). General Specifications

Operating environment	Indoors, Pollution Degree 2, altitude up to 2000 m (6562.20 ft)					
Operating temperature	Temperature: -10°C to 40°C (14°F to 104°F), Humidity: 80% RH or less					
and humidity	(no condensation)					
Storage temperature and humidity	-10°C to 50°C (14°F to 122°F), 80% RH or less (no condensation)					
Dustproof and waterproof	IP20 (EN 60529)					
Applicable standards	Safety EN 61010					
	EMC EN 61326 Class A					
Power supply	100 V to 240 V AC, 50 Hz/60 Hz, Maximum rated power: 140 VA					
	Anticipated transient overvoltage: 2500 V					
Backup battery life	Clock, settings and integration values (Lithium battery), Approx. 10 years, @23°C (73°F)					
Dimensions	340 mm (13.39 in) W × 170 mm (6.69 in) H × 156 mm (6.14 in) D (excluding protrusions)					
Mass	4.6 kg (162.3 oz) with PW3390-03					
Product warranty period 3 year						
Accessories	Instruction Manual x1, Measurement Guide x1, Power cord x1, USB cable (0.9 m (2.95 ft)) x1, Input cord label x2, D-sub connector x1 (PW3390-02, PW3390-03)					

Introduction to Current Sensors Designed for High-accuracy Measurement

Technology that Supports the Evolution of Current Testing

High-frequency currents are detected by a winding (CT), while DC to low-frequency currents are detected by a flux gate.

Zero-flux method: achieving stable, wideband measurement from DC to high frequencies

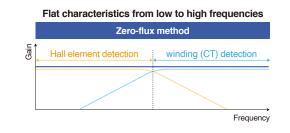

High-accuracy sensors use the "zero flux method (flux gate detection type)" as the measurement method. High-frequency currents are detected with the winding (CT method), and DC to low frequency currents are detected using a "flux gate."

Flux gate detection

Flux gate detection delivers excellent linearity and can measure currents across a wide range of magnitudes with a high degree of accuracy.

The flux gate component, used in DC detection, has extremely small offset in a wide range of temperatures due to its operating principle and therefore achieves high precision and superior stability. Ideal for measurements that require high accuracy using instruments such as power analyzers and power meters. Highly applicable

for testing inverter efficiency, inverter output power, reactor or transformer loss, as well as long-term DC measurements.

Zero-flux method (flux gate) current sensors

CT6841A, CT6843A CT6844A

CT6904A

CT6862, CT6863 CT6872, CT6873

Clamp types

Clamp-type sensors are quick and easy to connect, and used for testing finished products, an application where it is difficult to cut wires. Capable of functioning at temperatures from -40°C to 85°C, they're used in high-temperature environments such as engine compartments.

WLTP-compliant fuel economy (electricity cost) performance testing

Pass-through types

Pass-through sensors deliver the ultimate level of accuracy and stability. With a broadband measurement at up to 10 MHz and measurement of large currents of up to 2000 A, they're used in state-of-the-art research and development.

 *7 ±(% of reading + % of range) , range is PW3390

 \times (or reading + x or range), range is 100000 CT6873/C1C76873-01: Add ±0.15% of the range for 1 A range or 2 A range. *⁸ The CT6872-01 has a 10 m cord. For the CT6872-01, add ±(0.015 x f kHz)^o for phase accuracy for frequencies of 1 kHz < f ≤ 1 MHz.

Custom cable lengths also available. Please inquire with your Hioki distributor.

Standard Sensor

CT9920 (sold separately) is required to connect PW3390 to the sensor with HIOKI PL14 on the output connector.

	AC/DC CURRENT SENSOR CT7642 AC/DC AUTO ZERO CURRENT SENSOR CT7742	AC FLEXIBLE CURRENT SENSOR CT7044, CT7045, CT7046

Summed waveform output (CT9904 connected)

* CT9904 (sold separately) is required to connect to PW3390.

Model: POWER ANALYZER PW3390

Model No. (Order Code)	D/A output	Motor analysis
PW3390-01	_	_
PW3390-02	0	-
PW3390-03	0	0

Accessories: Instruction Manual ×1, Measurement Guide ×1, Power cord ×1, USB cable ×1, Input cord label ×2, D-sub 25-pin connector ×1 (PW3390-02, PW3390-03)

• The separately sold voltage cord and current sensor are required for taking measurements.

• Specify the number of built-in channels and whether to include the Motor Analysis & D/A Output upon order for factory installation. Please contact your local Hioki sales subsidiary or branch for changes after shipment.

Current measurement options (High accuracy: clamp type)

Model No. (Order Code)	Model	Rated current	Frequency band	Cable length
CT6846A	AC/DC CURRENT PROBE	1000 A rms	DC to 100 kHz	3 m

** CONVERSION CABLE CT9920 is required to connect to the PW3390.

CONVERSION CABLE CT9900

[Applicable products] CT6841, CT6843, CT6844, CT6845, CT6846, CT6862, CT6863, 9272-10

current sensor with HIOKI PL23 on the output connector.

Required to connect PW3390 to the

CONVERSION CABLE CT9920

1. F

Required to connect PW3390 to the current sensor with HIOKI PL14 on the output connector.

CONNECTION CABLE CT9904

Cable length: 1 m (3.28 ft) Required to connect the summing waveform output terminal of CT9557 to PW3390.

[Applicable products] CT9557

[Applicable products] CT7742, CT7642, CT7044, CT7045, CT7046

Voltage Measurement Options

3 m (9.84 ft.) length CAT IV 600 V, CAT III 1000 V

VOLTAGE CORD L9438-50

CAT IV 600 V, CAT III 1000 V

Connection Options

EXTENSION CABLE SET L4931 banana-banana (red, black, 1 each), For extension of L9438-50 or L1000, approx. 3 m (9.84 ft.) length, With connector

banana-banana (red, black, 1 each), alligator clip,

spiral tube, approx. 3 m (9.84 ft.) length

CATIV600 V, CATIII1000 V

WIRING ADAPTER PW9000

When making a 3-phase 3-wire (3P3W3M) connection, this product allows you to reduce the number of voltage cords from 6 to 3.

CATIV600 V, CATIII1000 V

For motor analysis input

Cable length: 1.6 m (5.25 ft) CATII600 V. CATIII300 V

CONNECTION CABLE 9683

For synchronous measurement,

Cable length: 1.5 m (4.92 ft)

BNC-BNC.

CATIV600 V, CATIII1000 V

PATCH CORD L1021-01

CAT IV 600 V, CATIII 1000 V

PATCH CORD L1021-01

for branching voltage input, banana branch to

for branching voltage input, banana branch to

connection, this product allows you to reduce

the number of voltage cords from 6 to 4.

banana clip (red \times 1), 0.5 m (1.64 ft.) length

LAN CABLE 9642 Supplied with straight to cross conversion

connector, Cable length: 5 m (16.41 ft)
