### The world's first Arbitrary Waveform Transceiver

Introducing Tabor's all new Proteus series, the world's first Arbitrary Waveform Transceiver. In its benchtop platform, with a 9" touch display and on-board PC the system integrates the ability to transmit, receive and perform digital signal processing all in a single instrument. The fully standalone operated system, offers industry leading performance, various configuration options, an innovative task oriented programming, and user programmable FPGA. So whether it is for aerospace and defense, telecommunications, automotive, medical or high-end physics applications Proteus opens the door to a world of infinite possibilities.

### **Leading Features:**

Dual, four, eight or twelve channel 1.25GS/s & 2.5 GS/s 16 bit, or dual, four or six channel 9GS/s 16 bit. AWG & AWT configurations

Integrated NCO for digital up-converting to microwave frequencies

Real time data streaming directly to the FPGA for continuous and infinite waveform generation

9GHz bandwidth. 2.7GS/s 12 bit digitizer option for feedback control system and conditional waveform generation

Innovative task oriented sequence programming for maximum flexibility to generate any imaginable scenario

noise and spurious performance

User customizable FPGA for application specific solutions

Standalone 4U. 19" wide benchtop platform, with 9" touch display, USB 3.0, 10G Ethernet and thunderbolt high speed interfaces

Up to 16GS/s waveform memory with the ability to simultaneously generate and download waveforms.

# **PROTEUS**

Infinite possibilities

### Standalone and easy to use

The benchtop version of the Proteus series offers up to 12 channels in a 4U, 19" benchtop box. With a 9" touch display and on-board PC the benchtop platform enables users to program the instrument without the need of an external PC. Users can program the instrument from the on-board PC using various programming environments such as Matlab, LabView, Python, and more. So for synchronized, phase coherent, multi-channel applications such as quantum physics and radar applications the Proteus arbitrary waveform transceiver is an ideal, high performance and cost effective solution.

### Ultra-fast data transfer rates

Spending more time setting up your generated scenario than actually running it? The Proteus Benchtop platform utilizes PCI express Gen 3x8 lanes connection that enables up to 64Gb/s of data transfer speed. This enable the Proteus arbitrary waveform transceiver to offer the fastest waveform download available on the market today, saving you one of your most valuable resources, time.

### Feedback control system

Many of today's applications, require conditional waveform generation depending on input signals from the environment. The Proteus arbitrary waveform transceiver flawlessly integrates both DAC and ADC in one system, controlled by a single FPGA for optimal synchronization and minimum latency. This high speed control system provides a feedback loop for fast decision making on the fly with minimum latency.

## Generate any imaginable scenario

The new series offers an innovative task oriented sequence programming where user can change the full instrument set up at every line of the task table. In addition, not only can users of the Proteus series instruments generate and download waveforms simultaneously, they can stream data directly to the FPGA without the need to use the built in memory. This enables generating random, unique and infinitely long scenarios directly from the controlling PC at DAC speeds of up to 6GS/s. So no matter whether your scenario is extremely complex, infinite or even dynamic you can generate it with the Proteus series model.

GENERAL CHARACTERISTICS	P9082/4/6B	P2582/4/8/12B	P1282/4/8/12B	
MAX. SAMPLE RATE	9GS/s	2.5GS/s	1.25GS/s	
RESOLUTION	16-bit <sup>(1)</sup>			
ENOB AT MAX. FREQUENCY	TBD			
NUMBER OF CHANNELS	2/4/6	2/4/8/12	2/4/8/12	
BANDWIDTH	9GHz <sup>(2)</sup> 4.5GHz <sup>(3)</sup>	5GHz <sup>(2)</sup> 2.5GHz <sup>(3)</sup>	2.5GHz <sup>(2)</sup> 1.25GHz <sup>(3)</sup>	
MEMORY	Up to 16GS	Up to 8GS	Up to 4GS	
INTERFACE	USB 3.0, 10GE, Thunderbolt 3			
LATENCY / SYSTEM DELAY	200ns			
FINE DELAY	-5ns to 5ns			
DELAY RESOLUTION	5ps resolution			
COARSE DELAY	0 to wavelength in 1 sample point resolution			
INITIAL SKEW BETWEEN CHANNELS	0ps			

(1) Depending on sampling mode (2) Direct output option (3) DC output option
