GENERAL PURPOSE COMB GENERATOR

1 Introduction

The TBCG4 is a general purpose harmonic comb generator with a switchable base frequency of 20 MHz, 10 MHz or 5 MHz. It generates a flat comb spectrum up to 1 GHz. The comb generator is powered via a USB C socket on the rear panel.

The TBCG4 is designed and characterized to serve as a versatile lab tool for measuring cable resonances, shielding effectiveness, filters, crosstalk, EMC test setups and more. Comb generators are commonly utilized as a general purpose source for wideband RF signals or narrow pulses with a fast rise time.
